About this document

This document describes the main new functionality in the Webforum 15.4 release. It contains new functionality in all the different Webforum services, i.e. Teamwork, Project and Professional. This means that not all customers have access to all the functionality described here.

If you are interested in getting access to functionality that you currently do not have, please contact Webforum or a Webforum partner.

Overview

The following functionality is new:

Module/Function	Description of changes
Start page	Link to documents and folders in the Info widget
Documents	New plugin for Internet Explorer
Contacts	Possibility to send messages from Contacts
Reports	Analysis (previous version) discharged (Dec 2015)
Risk Management	Risk matrix background colors
	Project required for risks

Start page / Dashboard

Link to documents and folders in the Info widget

It is now easier for administrators to insert links to document and folders into the start page Info widget. Click on the paper clip icon and select a document or folder.

Documents

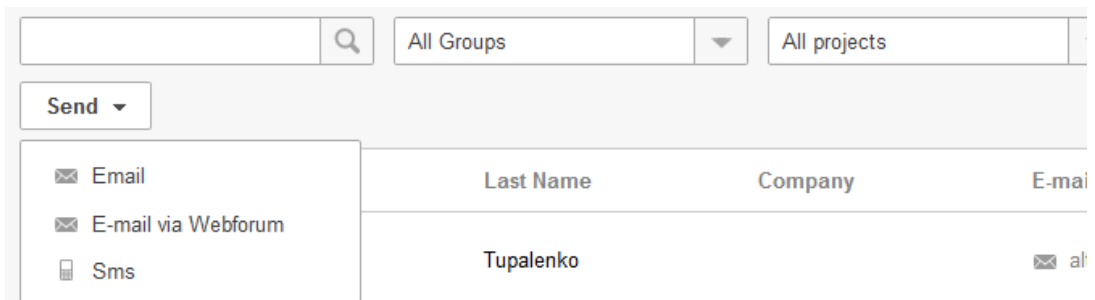

New plugin for Internet Explorer

A new plugin has been developed for Internet Explorer. It supports the same functionality as today's plugin; edit online and drag and drop. The new plugin will be rolled out to all customers over the coming months. The plugin supports 32 bit IE9, IE10 and IE11 just as the current plugin does. There is also a plugin for Firefox. A version for Chrome will soon be available.

Contacts

Possibility to send messages from Contacts

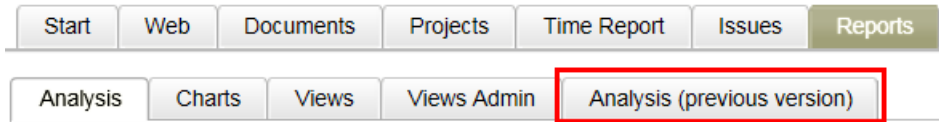

It is now possible to send messages from the Contacts module. Select “E-mail”, “E-mail from Webforum” or “SMS” from the Send button. “E-mail” opens the e-mail program on the user’s computer with the selected users as recipients in the To field. “E-mail from Webforum” lets the user send e-mails from the system. “SMS” lets the user send SMS text messages from the system.

Reports

Analysis (previous version) discharged

The tab Analysis (previous version) will be closed down **during December 2015**.
The tabs Analysis, Charts, Views and Views Admin will continue to work as usual.

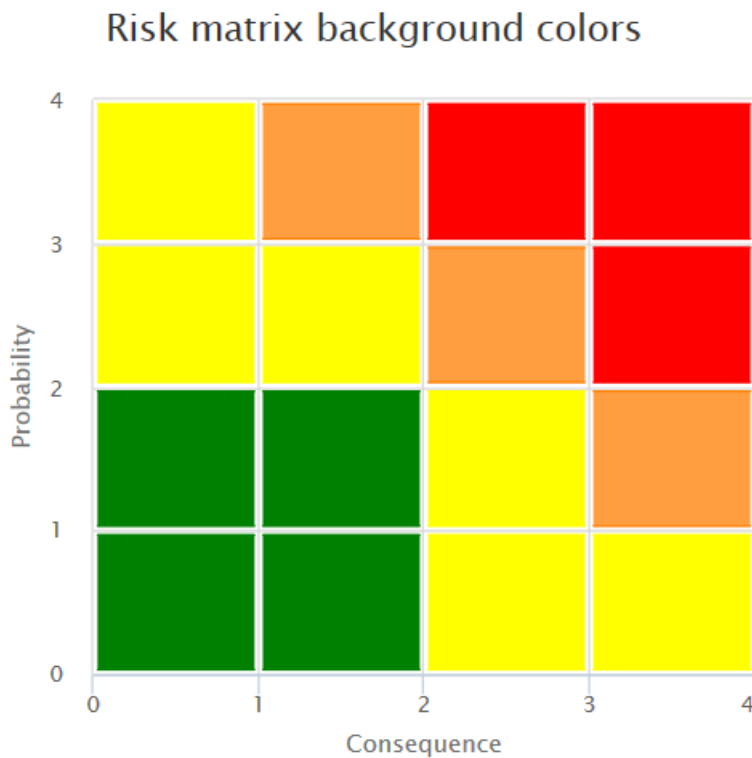

Reports menu

Risk management

Risk matrix background colors

The function gives an administrator the possibility to change background color of the cells in the risk matrix. The setup is common for a workspace.

When hovering over a cell, the list icon is displayed. Click on the list icon opens a list with the following values: White (default), Red, Amber, Yellow and Green. When selecting a color value, the background color changes accordingly.

Risk parameters

Project required for risks

There is now a parameter available that controls if project is required for risks. If the parameter "Project is required for risks" = Yes, then the user is required to enter a project for the risk when the risk is created.

Risk parameters

<input type="checkbox"/>	Value	Probability	Description
<input type="checkbox"/> 	1	Low	
<input type="checkbox"/> 	2	Medium	
<input type="checkbox"/> 	3	High	
<input type="checkbox"/> 	4	Very high	

<input type="checkbox"/>	Value	Consequence	Description
<input type="checkbox"/> 	1	Low	
<input type="checkbox"/> 	2	Medium	
<input type="checkbox"/> 	3	High	
<input type="checkbox"/> 	4	Very high
